TITLE: Synthesis and anti-Helicobacter pylori activity of
 pyloricidin derivatives: II. The combination of amino
 acid residues in the dipeptidic moiety and its effect
 on the anti-Helicobacter pylori activity
 AUTHOR(S): Hasuoka, Atsushi; Nishikimi, Yuji; Nakayama, Yutaka;

AB The novel natural antibiotics pyloricidin A, B and C, consisting of a common (2S,3R,4R,5S)-5-amino-2,3,4,6-tetrahydroxyhexanoyl-.beta.-D-phenylalanine moiety and a terminal peptidic moiety (pyloricidin A: L-valine-L-valine-L-leucine; pyloricidin B: L-valine-L-leucine; pyloricidin C: L-leucine), exhibit potent and highly selective anti-Helicobacter pylori activity. In order to develop more potent compds. and to investigate structure activity relationships for the peptidic moiety with regard to the combination of amino acids, a series of derivs. with various dipeptidic moieties were prepd. and evaluated for their anti-H. pylori activity. The combination of the two amino acids in the moiety was found to have a significant effect on the activity; the compd. with Nva-Abu showed excellent anti-H. pylori activity with an MIC value of 0.013 .mu.g/mL against H. pylori TN2. In addn., this compd. was found to show 60% clearance of H. pylori from infected Mongolian gerbils upon repetitive oral administration (10 mg/kg, b. i. d. for 7 days).

AB The novel natural antibiotics pyloricidin A, B (I) and C (II) possess potent and highly selective antibacterial activity against *Helicobacter pylori*. In order to investigate the structure-activity relationships for the terminal peptidic moiety, a series of I and II derivs., bearing various amino acids in the moiety, were prepd. and evaluated for their anti-*H. pylori* activity. The derivs. bearing .alpha.-D-, .beta.- and .gamma.-amino acids or peptidemimetics showed drastically decreased activity. On the other hand, the derivs. with .alpha.-L-amino acids were found to maintain the activity. Among the derivs. prepd. in this work, the allylglycine deriv. III showed the most potent anti-*H. pylori* activity, with an MIC value of less than 0.006 .mu.g/mL against *H. pylori* NCTC11637, which is 60-fold greater than the activity of the lead compd. II. pyloricidin B and pyloricidin C.

AB The novel natural antibiotics pyloricidin A, B and C, which possess potent and highly selective anti-Helicobacter pylori activity, were synthesized from D-galactosamine as a chiral template for the common (2S,3R,4R,5S)-5-amino-2,3,4,6-tetrahydroxyhexanoic acid moiety. The synthetic strategy, using 2-amino-2-deoxyuronic acid derivs. as key intermediates, was also useful to prep. a series of derivs. modified at the .beta.-D-phenylalanine and with altered stereochem. on the 5-amino-2,3,4,6-tetrahydroxyhexanoic acid moiety. From the drastic decrease of their anti-H. pylori activity, it was clear that the

.beta.-D-phenylalanine part and the stereochem. of the 5-amino-2,3,4,6-tetrahydroxyhexanoic acid moiety were significant for the activity.

AB Novel anti-Helicobacter pylori antibiotics, pyloricidins A, A1, A2, B, C and D were isolated from Bacillus sp. HC-70 and Bacillus sp. HC-72 by column chromatogs. using adsorption and ion exchange resins. Their structures have been elucidated based on spectroscopic and degrading studies and shown to be peptide-like compounds. These compounds contained two unusual amino acids, viz., 5-amino-2,3,4,6-tetrahydroxyhexanoic acid and 3-amino-3-phenylpropionic acid (.beta.-phenylalanine). The structure-activity relationship studies suggested that 3-(5-amino-2,3,4,6-tetrahydroxyhexanoyl)amino-3-phenylpropionic acid moiety was essential for anti-H. pylori activity.

AB Novel anti-Helicobacter pylori antibiotics, pyloricidins A, A1, A2, B, C, and D, were discovered in the culture broth of 2 bacilli strains. Pyloricidins selectively inhibited the growth of H. pylori. Pyloricidin B was efficacious in the treatment of gastric infection caused by H. pylori in Mongolian gerbils and may be promising for cure of H. pylori infection as a single agent.

ACCESSION NUMBER: 1999:64823 HCAPLUS

DOCUMENT NUMBER: 130:125408

TITLE: Preparation of polyol-amino acid compounds having activity against Helicobacter pylori

INVENTOR(S): Miyagawa, Ken-ichiro; Tsubotani, Shigetoshi; Nakao, Masafumi; Nakano, Yoshitaka; Kamiyama, Keiji; Izawa, Motoo; Akiyama, Yohko; Nishikimi, Yuji

PATENT ASSIGNEE(S): Takeda Chemical Industries, Ltd., Japan

SOURCE: PCT Int. Appl., 178 pp.

CODEN: PIXXD2

DOCUMENT TYPE: Patent

LANGUAGE: English

FAMILY ACC. NUM. COUNT: 1

GI

AB Title compds. I [R1 = (un)substituted amino, (un)substituted amino acid residue, (un)substituted peptide residue; R2 = optionally esterified or amidated carboxy; R3, R4, R5, R6 independently = (un)protected OH; Q = (un)substituted aryl] or a salt thereof, isolated from *Bacillus* cultures and chem. modified, are described. I possess anti-*Helicobacter pylori* activity, and useful in the prevention or treatment of various diseases assocd. with *Helicobacter* bacteria, such as duodenal ulcer, gastric ulcer, chronic gastritis, and cancer of the stomach. Thus, leucine-polyol conjugate II (R = H, R7 = OH) (HC-70III), isolated from *Bacillus* sp. HC-70 or from *Bacillus insolitus* HC-72, underwent N-terminal peptide coupling with a variety of amino acid derivs., or amidation or esterification at the C-terminus to give a variety of derivs., e.g. II [R = H, PhCH2O2C (Cbz), H-Ala, H-Sar, H-Phe, H-Lys, H-Glu, H-Orn, H-Asn, H-Gln, H-Thr, H-Leu, H-Ile, H-Ser(Me), H-Val, H-Nva, H-Nle, H-D-Ala, R7 = OH, OCHPh2, OEt, OCH2OCMe3, NH2]. A variety of pharmaceutical formulations contg. I (R = H, R7 = OH) are given.

Scientific and Technical Information Center

Requester's Full Name: MIKE MILLER Examiner #: 69404 Date: 5/5/03
Art Unit: 1654 Phone Number 301-4230 Serial Number: 091857-987
Mail Box and Bldg/Room Location: CM1 10A03 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Polyol compounds, their production & use

Inventors (please provide full names): Keiji Yamiyama, Yuji Nishikimi, Atsushi
Yasuda, Masafumi Nakagaki, Ken-ichiro Miyagawa, Yoshiko Akiyama

Earliest Priority Filing Date: 1/7/1999

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

please search compound of
claim 1.

Docket No. 2001_0710A

Filed June 13, 2001

POLYOL COMPOUNDS, THEIR PRODUCTION AND USE

[Corresponding to PCT/JP00/00023

Filed January 6, 2000]

PRELIMINARY AMENDMENT

Assistant Commissioner for Patents,
Washington, DC 20231

Sir:

Prior to calculating the filing fee, please amend the above-identified application as follows:

IN THE SPECIFICATION

Page 1, immediately after the title, please insert:

This application is a 371 of PCT/JP00/00023 filed January 6, 2000.

IN THE CLAIMS

Please amend the claims as follows:

1. (Amended) A compound of the formula:

ATTACHMENT E

wherein X is L-serine residue, L-asparagine residue or (S)-2-aminobutyric acid residue and Y is α -L-amino acid residue, or a salt thereof.

7. (Amended) A pharmaceutical composition which comprises the compound claimed in claim 1 or its pro-drug and a pharmaceutically acceptable additive.

12. (Amended) A pharmaceutical composition which is a gastric mucosa adhesive pharmaceutical composition comprising (a) a compound as claimed in claim 1, (b) a lipid and/or a polyglycerol fatty acid ester and (c) a viscogenic agent capable of being viscous with water.

19. (Amended) A method for manufacturing a pharmaceutical composition for *Helicobacter pylori* infectious disease, which comprises mixing the compound according to claim 1 or its pro-drug with a pharmaceutically acceptable additive.

20. (Amended) The method as claimed in claim 19, wherein the composition is for treating or preventing a *Helicobacter pylori* infectious disease.

21. (Amended) The method as claimed in claim 20, wherein the *Helicobacter pylori* infectious disease is gastric or duodenal ulcer, gastritis, gastric cancer or gastric MALT lymphoma.

22. (Amended) A method for producing a compound claimed in claim 1, which comprises reacting a compound of the formula:

(II)
